## Plant Pure Seed

Few planters realize the loss that is sustained thru the planting of foul impure seed. Not only is it costly to eradicate the weeds but it has been proven that poor seed costs six times as much as good seed.

Don't gamble with the food supply of our country. Plant only good quality seed.

THE WINNER MILL will do almost a perfect job of taking wild oats out of wheat. Each mill equipped with 14 sieves and screens. We have them in three sizes.

We also have the Clipper Mill equipped with 12 screens which can be adjusted to clean any kind of grain or grass seed.

If you have no way to clean seed, bring it to us. We are equipped to clean all kinds.

**TERMS**—Our terms are cash with order or C. O. D. unless arrangements has been made for credit.

The Purina Mills maintain one of the most extensive experimental farms in the world and in connection with their Laboratories in St. Louis, they are able to make and prove the worth of feed and sanitation products for all kind of farm animals. They manufacture a feed designed to meet the conditions of each individual feeder. If you have your own grain and hay, we have Purina Supplements to balance your feed for faster, more economical production of meat, eggs, and milk. If you do not have your grain then complete feeds can be obtained that are scientifically balanced and blended. For better feeding results your livestock must have the proper minerals, vitamins, and balanced Protein which are to be found in all Purina feeds.

On account of continual changing prices and conditions, we are not publishing prices on feed and many other items. We will be glad to quote prices on request or will invoice at the prevailing market price when order is received.

The following is a partial list of Feed, Remedies, Animal and Poultry Supplies, Harness, etc. which we carry and will be glad to quote prices on or better still come in and see what we have to offer. You may not want to buy but we are always glad to see our old friends as well as to make new ones.

## Plant Only Disease Free Potato Seed

What about this year's potato crop? The country is badly infested with Bacterial Ring Rot. You will have to be very careful in your selection of seed. Plant only disease free seed and treat it; kill every bacteria on the seed.

Semesan Bel is a good safe treatment. It comes in  $\frac{1}{4}$  lb., 1 lb. and 5 lb. cans. 1 lb. will treat 60 to 80 bushel.

The next big problem is that deadly pest Psyllid, whose life is only about two weeks, but in that short time so many eggs that hatch in from three to five days are laid on the underside of the leaf, that a whole field of potatoes begin to change from green to yellow. Looks like every field will have to be sprayed. A solution of one gallon Liquid Lime Sulphur to forty gallon water is a formula used by Etymologists. Use Commercial sulphur unless you can test it correctly. 32 Baume is weakest solution recommended. Two pounds Zinc Arsenate added will help rid the plants of potato bugs.
